Rupam Debnath

DevOps Engineer

rumapdebnath75@gmail.com | +91 7005216528 | LinkedIn | GitHub | Bengaluru, India

PROFESSIONAL OVERVIEW

DevOps engineer with 3+ years of experience in managing multi-cloud infrastructure across AWS, Azure and GCP using Terraform (Infrastructure as Code). Specialised in end-to-end CI/CD pipeline management with GitOps and Jenkins. Strong expertise in designing Microservices and Monolith Architecture, building dynamically scalable distributed systems with hands-on experience in DevSecOps practices and implementing comprehensive observability and monitoring solutions for production environments.

CORE COMPETENCIES & TECHNICAL SKILLS

- **Cloud & Infrastructure:** Amazon Web Services | Microsoft Azure | Google Cloud Platform
- **Programming & Scripting:** Python Scripting | Shell/Bash Scripting | SQL | Linux
- **DevOps & IaC:** Docker | Kubernetes | Terraform | Ansible | Jenkins | Networking | Kafka | ArgoCD | GitHub Actions | GitHub | GitLab | Helm | Azure DevOps | EKS | ECS
- **DevSecOps :** Trivy | SonarQube | OWSP ZAP | Docker Scout
- **Monitoring & Observability:** Grafana | Prometheus | Tableau | cAdvisor | OpenTelemetry | Loki
- **Agentic AI & ITSM Tools:** GitHub Copilot | Claude Code | Ollama | Jira | Confluence | ServiceNow | Slack Bot

WORK EXPERIENCE

Software Engineer – Cognizant, India *March, 2023 – Present*

Project 3: Sedgwick-Project Quantum| Client: Sedgwick

- Configured Jenkins plugins in the pipeline to build, test and deploy code, reducing deployment time by **40%** and improving release reliability.
- Streamlined automation solutions for configuration management, environment provisioning, automated code-base compilation and proactive log/events monitoring using python scripting reduces manual efforts by **80%**.
- Built an end-to-end DevSecOps pipeline by integrating Trivy for container and dependency scanning, SonarQube for SAST and code quality analysis, vault for secrets management and OWASP ZAP for DAST strengthening application security across the CI/CD lifecycle.

Project 2: WM-GTS_GEC_MINT Application| Client: Walmart

- Built a centralized monitoring and alerting framework using Prometheus, Grafana, and XMatters, enabling dynamic log ingestion, real-time dashboarding, and automated threshold-based notifications. Improved system reliability and reduced production issue resolution time by **35%**.
- Implemented GitOps-driven continuous integrations & delivery using GitHub Actions and ArgoCD to automate Kubernetes deployments which reduces deployment errors by **40%** while ensuring consistency across environments.
- Authored and maintained operational runbooks in Confluence, establishing standardized support procedures that reduced manual troubleshooting effort by **50%** and accelerated incident response across production environments.

- Utilised Jira for incident, change, and task management while working within Agile frameworks to ensure timely resolution, continuous improvement, and effective team collaboration.

Project 1: CIS-Automation Tools & Platform

- Implemented Infrastructure as Code (IaC) using Terraform to automate provisioning and management of AWS and Azure resources.
- Managing Ansible playbooks to automate the configuration management of PROD, UAT and DEV environments, reducing manual intervention, operational costs, and rework by approximately **60%**, while improving deployment consistency and reliability.
- Automated weekly infrastructure backup and cleanup workflows using cron jobs, reducing manual maintenance effort by **70%**, improving deployment recovery times by **60%**, and contributing to a significant reduction in production escalations.
- Participated in **24×7** on-call support for production environments, responding to critical incidents, performing root cause analysis (RCA).
- Hands-on experience in disaster recovery planning, testing, and execution, including the management of replicated Domain Controllers in alternate regions to support failover.

Programmer Analyst Trainee – Cognizant, India *September, 2022 – February, 2023*

Internship |Cognizant Technology Solutions

- Learned AWS and Azure user and resource management with least privileged access.
- Built Dynamic log monitoring system using CloudWatch and Azure Monitor metrics.
- Incident management in ServiceNow and reporting to client with interactive dashboard in Tableau and Power Bi.
- Deep dive into data cleaning and manipulating using SQL and Python libraries like Pandas, NumPy, Matplotlib.
- Managed Windows and Linux administrative tasks which gave core knowledge of networking.

EDUCATION

Bachelor of Technology *July, 2019 – June, 2022*
Techno College of Engineering Agartala Tripura, India

Diploma *July, 2016 – June, 2019*
Gomati District Polytechnic Tripura, India

ACHIEVEMENTS & CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate.
- AWS Certified Solutions Architect - Associate.
- Claude Certified Architect - Foundations

Professional Achievement

★ Recognised as "**Worked as One and Talented Associate**" for exceptional contributions to project.
